

Student Submission - Partial Answer (Student ID: A002)

Answer to Question 1

Encapsulation means hiding data inside a class. Private variables cannot be accessed from outside.

We use getter and setter methods to access private data.

Answer to Question 2

A class is like a template. An object is created from a class.

Answer to Question 3

Inheritance allows a child class to use properties from a parent class.

Example: Animal is the parent, Dog is the child.
